Abstract. - Darwin's Theory of Evolution is the widely held notion that all life is related and has descended from a common ancestor: the birds and the bananas, the fishes and the flowers -- all related. Darwin's general theory presumes the development of life from non-life and stresses a purely naturalistic (undirected) "descent with modification".

Origin of Species The problem for scientists today is that mutations have not yet been shown to create any new features, or new creatures, which explains why transitional forms are still lacking. As an alternative to Darwin's theory of gradualism, some scientists have proposed the theory of punctuated equilibrium.

CHAPTER 1. The Evolution of Insurance. ORIGINS OF RISK. At the dawn of modern human history, widely dispersed groups of tightly knit kin, whom we today refer to collectively as hunter-gatherers, relied almost exclusively on clan relatedness as their only bulwark against the ever-present risk of death, debilitating injury, and starvation.
